

Falcon Focus

Serving the Bay for over 32 Years

The Newsletter brought to you by **Falcon**
Electrical Ltd

The Optimum Solution to your needs

Low and behold!

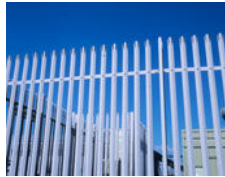

I'm sure many people have taken note of developments at McLean Park, including the brand new Graham Lowe Stand, and the two new middle lighting towers.

Visitors will be delighted with the alterations carried out by the Napier City Council, to provide better all-round facilities, and improved conditions for both Rugby & Cricket, especially Day-Night games. We were proud to carry out Electrical & Lighting alterations associated with the project, including the new (Digital Processor) Stadium Sound System.

We would also like to wish the Magpies all the best for the upcoming season.

Safety in the Workplace

As a Registered Site Safe company, we constantly review our Health & Safety policy, to ensure our work complies not only with our own quality control procedures, but also general and site specific safety requirements.

Falcon employees are encouraged to identify potential risks, and will gladly assist with any questions a client may have, especially when it comes to electrical safety.

Although some incidents in the workplace are almost impossible to eliminate entirely, we'd like 'do our bit' to reduce injury, through safe practices and education.

If you have any concerns, or simply like to help promote safety in your workplace, please visit www.sitesafe.co.nz for more information.

IP Surveillance

The world of Digital Surveillance is forever changing, and we'd like to bring new ideas to the market place. IP (Network-based) Cameras are now becoming more prominent, including hybrid and server based recording solutions. Please contact the security team to find out how your business could benefit from this new wave of technology.
